Special cartridge wet areas with copper shot and ACP wad in biodegradable material Greenwad®.

It can be shot in all rifles except for the No. 3 caliber 12 which must be tested "fleur de lis steel balls".

The ACP Greenwad® cartridge is equipped with Vouzelaud's patented ACP wad, injected into the Greenwad® biodegradable material, it will naturally disappear in nature. This major innovation limits the impact of fluff on the environment and performance is at the rendezvous.

- Calibres 12/67 mm in 28 g with 16 mm nickel-plated base
- Average speed: 400 m / s
- Star closure
- Sold in boxes of 10 cartridges

With a density of 8.92, copper is a more dense metal than steel: it allows a range gain of about 5 meters. However, its hardness, certainly less important than steel, does not allow to classify it as the lead cartridges. So there are also copper cartridges only for guns tested steel balls.
