BG9364	Cal. 9.3 x 62 GPA type	C	9.3 x 62	GPA	4492	880	20	179	130.00 € incl. tax

French monoblock bullet ammunition (GPA) specially designed for the most resistant game.

The guarantee of optimal penetration and a significant shock effect.

What characterizes the GPA ball the most is undoubtedly its effectiveness. This ball can be presented as a programmed fragmentation ball. The compression of fluid in the central channel causes, at first, a deformation of the front part (mushrooming) which triples the nominal diameter of the projectile, then, only under the effect of resistance, occurs the separation of the petals.
