SKU	Designation	French Law	Caliber	Bullet type	Energy (J)	Speed (m/s)	Pack.	Grains	MSRP
BW1335	Large hunting ammunition Browning cal. 30-06 Springfield BXS 180 gr - big hunt	C	.30-06 Spr.	BXS Hollow Point	4094	838	20	180	84.00 € incl. tax

For medium or heavy game!

The new Browning BXS Solid Expansion, BXC Controlled Expansion and BXR Rapid Expansion ammunition are perfect for use when hunting medium, large and large game (deer, wild boar, deer, doe ...).

BXR - Large Hunting Ammunition Browning Rapid Expansion

The Matrix tip keeps the speed and therefore the energy even at long distance while promoting a rapid expansion of the ball. This combination of the Matrix tip with this ogive structure specifically designed for immediate expansion combines extreme precision and instantaneous and massive energy transfer.

1. Matrix tip (mix of copper and polymer)

- Preserving long-distance speed for more energy
- Promotes rapid expansion

2. Exclusive fragmentation tip

- Large expansion hollow head for fast expansion and optimal energy transfer on the average game

BXS - Large Hunting Ammunition Browning Solid Expansion

The Browning BXS ball is ideal for heavy game. Its monolithic copper construction allows a mass retention close to 100%. It keeps all its energy for a deep penetration even in the most dense game and it guarantees a massive and lethal stopping power. Its polymer tip accelerates expansion to maximize shock impact. Nickel plated bushings resist corrosion and improve loading; it is the promise of a quick shot with the

assurance of a stopping power. Thanks to its lead-free construction, Browning BXS can be shot on hunting grounds imposing restrictions on the use of lead.

The image shows a box of Browning BXS ammunition, which is lead-free. The box is white with black and red text. The text on the box includes "BROWNING", "BXS", and "LEAD-FREE". The box is shown from a slightly angled perspective, showing the top and front. The background is white.

1. Polymer tip

- Better conservation of speed and energy over long distances
- Accelerates the expansion

2. Hollow Point

- For immediate expansion and massive energy transfer

3. Monolithic construction (copper)

- Mass retention close to 100%
- Deep penetration
- Unleaded

BXC - Large Hunting Ammunition Browning Controlled Expansion

The Browning BXC ball is designed for heavy game for which you want a stopping power and a deep penetration. The fused ball with a mass retention close to 100% and the aluminum tip (Terminal Tip) guarantee the penetration of dense tissues and bones. This ball construction, combined with a heavy nose weight and boat tail, ensures precision, high speed and maximum efficiency at all distances.

The image shows a box of Browning BXC ammunition, which is lead-free. The box is white with black and red text. The text on the box includes "BROWNING", "BXC", and "LEAD-FREE". The box is shown from a slightly angled perspective, showing the top and front. The background is white.

1. Merged ball

- Controlled expansion
- Increased weight retention for optimal energy transfer and deeper penetration

2. Terminal Tip (aluminum tip)

- Punches thick leather and breaks solid bones

3. Warhead weight and tapered warhead base

- Preserving high speed over long distances for increased accuracy and energy
