The benchmark for fire starters!

Originally developed for the Swedish army, fire steel is the best known and most efficient of fire starters. Its sparks at 3100 ° will ignite paper, wood, gas ... Effortlessly.

More environmentally friendly product made from biomass (plants). Assorted colors depending on availability.

The firesteel fire starter is composed of a ferrocerium bar which is the basic material of lighter stones. Rub it firmly with the back of a knife or the scraper provided to trigger a spray of sparks that will easily ignite birch bark, clematis seed, cotton, or other highly flammable material. Firesteel are not afraid of staying in the water, even for several weeks!
