Tactical flashlight with switch tip on body.

Focused beam torch equipped with a 1000 lumen LED for 3-level lighting:

- Intense: Range 500 m - autonomy 2 h
- Low: Range 228 m - autonomy 4 h
- Strobe
- Withstands a drop of 1m, waterproof IP44

LED torch supplied with 1 rechargeable 26650 4000 mAh 3.7 V battery, 1 battery charger (recharging is done without removing the battery), 1 wrist strap and 1 user guide.

Interview :

Blow gently to remove any dust or debris from the lens (or use a special soft lens brush). To remove dirt or fingerprints, clean with a soft cotton cloth in circular motions. Using a rough cloth or rubbing the lens unnecessarily may scratch it and possibly cause irreversible damage. For a more thorough cleaning, use a special lens wipe and a photographic-type lens cleaning liquid, or isopropyl alcohol. Always apply the liquid to the cloth and never directly to the lens. Cleaning the contacts of your flashlight from time to time improves the performance of the flashlight. This is because dirty contacts can cause the flashlight to flicker, turn on intermittently, or not turn on at all. Every 6 months, clean the threads of the battery compartment cover and torch tube with a dry cloth, then apply a thin coat of silicone lubricant to the rubber O-ring. Never remove the lens head or any of the internal components. You could damage the flashlight and void your warranty.

Precautions for use:

Fully charge the battery before first use. LMP1019 Multi-Color LED Flashlight is a high intensity lighting device capable of causing eye damage. Avoid directing light directly into someone's eyes. The operating time of your flashlight depends on whether it is used continuously or intermittently. Intermittent operation can extend the battery life. The LED is a light source that will work for the life of the lamp. It will never be necessary to replace it. Remove the battery when you are not using the lamp for an extended period of time. Because the LED torch is a high-intensity light, it can reach high temperatures. It is normal for the aluminum

body of the lamp to become very hot during continuous use. Keep it away from children. Handle it with care.
