Cerakote Olive finish, low axle and recoil control for the stand.

Modern version of the Rhino 60 DS, designed for sport shooting and intensive training.

- **caliber:** .357 Magnum
- **shots:** 6
- **total length:** 266 mm
- **barrel length:** 152 mm
- **weight:** 955 g
- **carcass:** Ergal (7075-T6)
- **finish:** Cerakote Olive matte
- **sights:** adjustable optical fibers
- **mode:** single and double action (SA/DA)

The **Rhino 60 DS** in Cerakote Olive livery combines sleek aesthetics with technical choices geared toward performance on the range. Its configuration promotes repeatability and comfort during long training sessions, while providing a visual presence typical of competition equipment.

Ergonomics

The anatomically shaped grip with finger indentations ensures a consistent, natural grip. The feel in your hand is immediate: the stable grip reduces fatigue and allows you to quickly re-aim the weapon between shots.

Lower axis

The term "low-axis" describes the positioning of the barrel aligned with the lower chamber of the cylinder. By moving the recoil axis closer to the hand axis, this configuration reduces barrel rotation and decreases windage, improving control during double taps and rapid series.

Ergal (7075-T6)

Ergal is a high-strength aluminum alloy (7075-T6) used for the frame. It offers an excellent strength-to-weight ratio: rigid structure for precision, while limiting the weight carried by the shooter during training.

Cerakote

Cerakote is a ceramic coating applied in a matte finish that protects against wear and corrosion. In this olive version, it combines functional protection with a sleek finish that's easy to maintain between treatments.

Picatinny rail

The Picatinny rail allows for the installation of standardized optics, lasers, or lamps. This modularity helps the competitor configure the weapon according to the event or their preferences, without compromising the repeatability of the aiming.

Moon clips

Moon clips hold cartridges together for quick loading and extraction from the cylinder, convenient for timed drills or to reduce re-cocking time in training.

Optical fibers

Fiber optic sights capture ambient light to provide bright, quick-to-acquire aiming points. Their adjustability allows for elevation and alignment to be adjusted to the shooter's preference.

Interview

The Ergal + Cerakote combination makes cleaning easier and limits surface corrosion. Regular maintenance-lubricating the axes, checking the barrel, and inspecting the moon clips-will ensure optimal shooting consistency and longevity.

- **barrel:** 6-shot steel
- **plates:** anatomical wood
- **rail:** Picatinny under and above for accessories
- **accessories included:** 3 moon clips, screwdriver, swab, polypropylene case
- **ammunition compatibility:** can fire .38 Special
