A69074	Red Line Mini SFR HPA regulator with hose	Vente libre	249.00 € incl. tax

The *Mini* SFR is Redline Airsoft's newest regulator. The Mini SFR has the exact same performance and features as our class leading standard SFR regulator, but in a smaller package.

It works equally well with both standard high output tanks or low output, SLP type tanks. And just like the standard SFR, the *Mini* SFR is a fully balanced regulator. Why is that important?

Unbalanced regulators are subject to what is known as the "supply pressure effect." That means an unbalanced regulators output pressure is affected by changes to its input pressure.

Unbalanced regulators can have a very large pressure change as their supply tank empties. This can cause a velocity to drop as the supply tanks pressure drops.

Since the *Mini* SFR is balanced, its output pressure is unaffected by changes to its input pressure. That means even as the tank empties, the *Mini* SFR's output pressure, and therefore the guns velocity, will remain unchanged. This allows you to shoot the air tank virtually empty with no performance decrease. Effectively giving you more shots per tank.

The *Mini* SFR is the only balanced regulator sold for use in Airsoft.

The Q.D. on the regulator end of the hose lets you quickly detach the hose from your air system even with the system still pressurized for quick and easy tank refills. Now even with your hose fully integrated into your Vest / Harness tank refills are a breeze .

We recommend that only TechT Gun Sav be used to lube your *Mini* SFR regulator

The Redline *Mini* SFR is 100% made and assembled in the USA.

Sold with a reinforced Redline Airsoft line (female macroline 6mm / male US QD)
