Delory-Brumart stock shoe for Canardouze reducing recoil by 50%!

The buttstock shoe mounts between the stock and the buttplate.

- Recoil reduction by a spring integrated into the fixing tube and 2 guide rods with brass bearings.
- Cushioning level adjustable by a screw located at the end of the tube.
- Plates positioned on the butt and butt plate sides in aluminum alloy to be resized according to the shape of the weapon. Installation and cutting to be carried out by a gunsmith.

The Delory-Brumard shock absorber can reduce the recoil of the famous canardouze type hunting rifle by approximately 50%. Indeed, this juxtaposed 12-gauge shotgun intended for Gabion hunting has the specificity of simultaneously firing the 2 cartridges chambered in the 2 gun barrels!

Generally chambered in 12/89, the canardouze used with 2 cartridges loaded with 63 g of lead therefore generates a considerable recoil, despite its weight of more than 5 kg.

The Delory-Brumard anti-recoil sabot therefore allows, thanks to its spring cylinder, to absorb 50% of the recoil of the weapon and to make it much more comfortable when shooting.
