A scissor-pliers type mold for a single round bale

An essential and very easy to use tool, to make your round balls like in the 18th & 19th centuries:

- The molten lead is poured into the orifice
- We cool the clamp, and when we open it, the ball comes out of the mold.

The tiny gap between the two cavities allows the air to escape. Thus creating a ring of lead.

A functional historical reproduction type bullet mold, for casting lead bullets only.
