Shell holder for Lee APP press

The shell holders on this page are only compatible with the Lee APP press.

The APP (Automatic Processing Press) press is the fastest and easiest way to prepare cases and size warheads. It is also a very practical single-station reloading press. This is the first press on which you can mount tools either top or bottom for unprecedented automation on a single-station press. Despite its compact size, the APP press is actually very heavy. It is made with a wide variety of materials, the most suitable for each action. The lever and overmolded handle are machined from steel, the upper and lower tool holders are aluminum, and the low-stress elements are nylon or acetal copolymer. The APP features a "frameless" design with almost all forces going directly to the tools through steel links rather than through the frame. This single-station reloading press offers unparalleled visibility and hand space. Finally, it mounts very easily on any workbench or table.
