16 joule defense pistol with super powerful rubber bullets

The Charlie 1.50 pistol is a high-power self-defense weapon (16 joules) with an imposing appearance. With its metal slide and barrel, the weapon is heavy and comfortable in the hand like a real pistol.

Its semi-automatic operation and its impactable CO2 tank for immediate use make it a defense weapon that is always ready and modular thanks to its 2 5-round magazines.

Its 2 chargers allow you to modulate your response in the event of attack:

- 1 charger with pure rubber balls, softer and therefore less painful.
- 1 charger with rubber balls loaded with metal particles, heavier and harder, for maximum effect on the attacker.
- The removable magazine can be changed in an instant by pulling down the ambidextrous magazine catch located under the barrel.

Power is provided by a 12g CO2 cartridge located in the handle (delivered without sparclettes).

- The new cartridge can be hit suddenly at the bottom of the stock in an emergency.
- Rubber projectiles for defense (do not use Steel projectiles)
- Load indicator on the rear of the slide showing that the cartridge is impacted and the weapon is ready to fire.

Delivered with 2 5-round magazines, barrel cleaning swab and instructions in French, English, Italian, Spanish and German.

Technical information: **(see video tutorial)**

- The CO2 cartridge is installed head down in the butt of the gun.

- To remove the cartridge, pull the sole downwards and unscrew. Then put a cartridge back in and screw it in all the way.
- The CO2 cartridge remains intact and under pressure until it is struck by a blow on the sole of the handle when the weapon is needed.
- The percussion mechanism is entirely metallic and particularly resistant.
- It is possible to fire several magazines (sold as an option) with a 12g CO 2 cartridge.
- The Charlie gun only uses spherical balls (not compatible with plastic-skirted steel balls).
- Delivered without CO2 sparklets, to be purchased as an option.
