The Extreme-Point® lead is designed for hunters looking for rapid expansion and immediate stopping power.

The Extreme Point uses a higher percentage (48%) of its available frontal area than a traditional plastic tipped ball (22%) or a traditional soft point ball (8%).

This construction also provides an excellent ballistic coefficient which, combined with a very high initial speed, allows the warhead to maintain a significant residual speed even at long distances. The trajectories are taut and extremely precise.

The extreme efficiency of the EXTREME-POINT® family warheads is based on their exclusive design. Under their enormous plastic tip there is an impact diameter 2 to 6 times larger than traditional ammunition. When hitting its target, this imposing surface instantly transfers maximum energy for exceptional stopping power.

EXTREME POINT:

- LARGE DIAMETER POLYMER TIP: it accelerates the expansion of the bullet for immediate trauma on impact.
- **PRECISION:** the polymer tip and the aerodynamic profile of the warhead guarantee very high precision.
- PROGRESSIVE THICKNESS JACKET: it allows controlled expansion for optimal penetration.
