A53760	Egg trap 25cm	Vente libre	147.00 € incl. tax

Counterfoil egg trap, approved by the Ministry of the Environment.

The egg trap, specially designed to catch martens or martens attracted by this bait, is triggered as soon as the egg is moved by the predator. Its dimensions are Ø 25 cm. Its use is reserved for approved trappers.

To use it, place the egg flat inside the trap, ideally set up in a false nest where only the egg is visible. Once armed, the trap closes on the animal as soon as it grabs the egg. To maximize the chances of capture, it is recommended to bait several days in advance at the desired location.

Its high quality manufacturing, carried out by laser cutting, makes it a robust trap, protected from rust thanks to its cataphoresis painting. Its effectiveness will not fail to surprise you!

Although primarily intended for indoor use (such as in a chicken coop, barn or attic), this egg trap can also be placed outdoors. However, it should only be tensioned at night, unless it is installed in a small garden or placed in a crate. Make sure you secure access to the trap.

This trap belongs to category II and is approved under the reference PHE 610.
