A fly and mosquito repellent for volumes of 100 to 180 m3

Automatic timed insecticide diffuser, with spray frequency adjustable to 3 modes. Replaceable aerosol, 2 batteries which allow operation for at least 24 months in standard mode.

- Light mode: every 36 minutes
- Standard mode: every 15 minutes
- Intense mode: every 9 minutes

Delivered without refill, requires Coopermatic aerosol

Programmable automatic dispenser for aerosol cans with timed emptying.

Features :

COPYRMATIC Evolution is the new automatic dispenser for aerosol cans with programmed emptying, fully programmable, designed to meet the hygiene needs of homes, hotels, restaurants, bars, public establishments, stores, waiting rooms of professional offices and communities in general. COPYRMATIC Evolution is white in color, has a modern design that adapts to all environments, is silent and, once positioned and started, does not require any further intervention for spraying. Special cans equipped with a dosing valve, activated by the device, release a predefined quantity of product (insecticide, deodorizer or deodorizer) which, by spreading throughout the room, controls infestations of flying insects by creating a barrier effective against reinfestations, deodorizes the environment or neutralizes unpleasant odors. Depending on the product with which it is associated, COPYRMATIC Evolution can treat premises of 100 to 180 m3. In order to allow a more rational and economical application, in addition to offering a "standard" setting which allows operation every 15 minutes for 24 hours, COPYRMATIC Evolution allows you to program the distribution frequency, which can be light (every 36 minutes), medium (every 15 minutes) or intense (every 9 minutes), depending on the needs of different environments. COPYRMATIC Evolution is equipped with an audible indicator that signals the need to replace the cylinder or both batteries, allowing operation for at least 24 months on the "standard" setting. The device is also equipped with an indicator light which lights up as soon as the

dispenser is activated. The possibility of using aerosol bombs with deodorizing and insecticide action makes COPYRMATIC Evolution a highly professional instrument.

Methods of use:

Place COPYRMATIC Evolution at least 2 meters from the ground and direct it so that the jet is directed away from people. If used in combination with cans of insecticide, place COPYRMATIC Evolution near doors and windows so that the barrier effect prevents insects from entering the treated environments, thus protecting them from re-infestation, ensuring that the interval between sprays is set at 15 minutes.

Technical data :

Weight (without batteries and spray can): approximately 350 g

Dimensions (width, depth, height): 9.4 x 8.3 x 21 cm

Note

Complies with Directive 89/336/EEC - bears the CE marking. Information reserved for biocide and plant protection technicians and health authorities.
