## A sub-compact 9x19mm pistol with 11- and 14-round double-stack magazines that provide a slim, compact profile.

Optic-ready **subcompact** pistol, ideal for range shooting.

- **caliber:** 9x19mm
- **barrel length:** 3.4" (8.64 cm)
- **slide:** Optic Ready RMSc compatible
- **magazines supplied:** 11 and 14 rounds (double stack)
- **carcass:** fiberglass reinforced polymer
- **sights:** 3 white dots mounted in dovetail

The **MC2SC** stands out for its mastered ergonomics and a slide ready to receive a micro-sight: the idea is to offer a compact weapon with stable behavior on the firing line, with clearly visible organs and a short reset trigger which seduces with its regularity.

### Ergonomics and handling

The **reinforced polymer** frame features an aggressive texture and engineered grip zones for a firm hold. The double-stack magazine profile maintains a slim wheelbase, facilitating instinctive shooting and accuracy on reactive targets.

### Safety and dismantling

The **Take Down** disassembly system requires the firing pin to be removed to remove the slide, which simplifies maintenance operations without the need to pull the trigger - a guarantee of safety during work on the gunsmith bench.

### Optics and sights

The slide machined to accommodate a micro-sight ( **RMSc** format) allows direct and precise mounting of a red dot, improving acquisition speed and regularity when shooting on gong or silhouettes.

### Relaxation and sensations

The trigger incorporates an active safety; the starting weight measured at nearly 2.7 kg and the short reset promote reassuring and reproducible control of the shot, appreciated by demanding shooters.

**Finishing, handling and maintenance**

The 416 stainless steel slide, DLC black coating, and grip grooves facilitate handling even in wet conditions. The slide machining and DLC finish limit fouling and facilitate cleaning after intensive sessions.

**RMSc**

The **RMSc** format is a standardized footprint for compact micro-viewfinders. It allows direct mounting, ensuring a reproducible optical position and safe cohabitation with mechanical components.

**DLC (Diamond-Like Carbon)**

The **DLC** treatment deposits a hard, smooth layer which increases wear resistance and limits the adhesion of residues: concrete benefit = better sliding and simplified maintenance.

**Reinforced polymer**

The term **reinforced polymer** refers to an injected composite loaded with fibers, offering an excellent strength-to-weight ratio and high tensile strength-useful for reducing weight without sacrificing structural strength.

**Take down**

The secure **Takedown** system requires the firing pin to be rendered inert before partial disassembly: this reduces the risk of accidents and facilitates maintenance operations in the range or in the armory.

- **Cylinder head:** 416 stainless steel (DLC finish)
- **no scratch:** 1:16" (406 mm)
- **weight:** 552 g (unloaded) / 708 g (loaded)
- **charger button:** reversible
- **Optical configuration:** Red Dot micro compatible (direct mount)
- **trigger safety:** active safety on the trigger tail
