- **Sighting System:** Picatinny rail for optic mounting
- **Safety:** Manual safety system
- **Finish:** Flat Dark Earth
- **Mounting:** 21mm rail

Winchester XPERT rifle.

Winchester offers you a .22LR caliber rifle, ideal for beginners in shooting or for practicing target shooting. The Winchester XPERT is lightweight, weighing only 2 kg for a total length of 92 cm. Simple but effective, this rifle is equipped with a bolt-action rearmament system, a rear sight and a front sight, all in a modern and refined style.

But don't let its appearance fool you! Under its small garden rifle appearance, the XPERT has something to surprise. Its 46 cm floating barrel is rifled and threaded, allowing you to add a 1/2x20 sound moderator. Its barrel quality will give you groups of a precision comparable to that of much more ambitious rifles.

To enhance the weapon's lightness, Winchester has equipped it with a perforated synthetic stock. This is pistol-style, ensuring a better grip and optimal shooting comfort.

Winchester XPERT Features

This rifle is distinguished by several particularities, including its magazine. It is a 10-round rotating detachable magazine, designed like a cylinder, with the ammunition arranged in a circle rather than stacked on top of each other. This magazine is easy to load and unload.

Another notable feature of the Winchester XPERT is its ultra-short MOA Rimfire precision trigger, providing increased accuracy due to the absence of dead travel, drag and overtravel. The firing pin is released quickly and cleanly, improving the accuracy of your shots.

A long Picatinny rail is supplied with the weapon, along with the necessary screws to mount it on the top of the rifle, allowing you to add an optic for increased accuracy. A second Picatinny rail is hidden under the barrel, protected by a small black cover. This rail, with two slots, as well as a grenade ring, allow you to attach a lamp, a laser or a bipod.

Finally, the rifle comes with an adjustable stock and an additional butt plate, both larger than those installed by default, in order to adapt to everyone's morphology. The user manual and a trigger guard lock are also included.

Adjustable MOA starting group

Rimfire MOA precision trigger with a three-lever design guaranteeing the triple zero principle: zero dead travel, zero drag, zero overtravel. The firing pin is thus released cleanly and very quickly. The trigger weight is adjustable.

Ergonomic

The magazine release system is completely ambidextrous and easily accessible via the 2 side tabs or via the tab directly under the magazine. The magazine falls directly into your hand! The stock is hollowed out to reduce weight and the shoulder is always perfect.

Rotary charger

Detachable, rotating 10-round magazine. Compatible with 10/22® magazines. Easy to load and unload.

Threaded Barrel

The barrel is threaded at the muzzle (1/2x20 UNF) to mount a suppressor. A removable protection ring protects the thread when the weapon is used without a suppressor. The muzzle of the barrel is chamfered to protect the grooves of the barrel and guarantee always perfect accuracy.
