Expanding bullet for maximum effectiveness on dense targets.

.357 Magnum ammunition with JHP bullet designed to release its full power on impact, suitable for shooting at dense targets.

- Caliber: .357 Magnum
- Bullet type: JHP (Jacketed Hollow Point)
- Ball weight: 158 gr (10.2 g)
- Ballistic coefficient: 0.116
- Packaging: box of 50 units

Designed for high-level sport shooting

The **GECO .357 Magnum JHP** is designed for sport shooters seeking high accuracy and powerful ballistic performance. The jacketed hollow point (JHP) bullet provides outstanding stability and excellent trajectory control, even at high speeds.

Why choose a JHP ball?

The **hollow point profile** is designed to promote the expansion of the projectile upon contact with the target, thus optimizing energy transfer while limiting overpenetration in hard materials. This ballistic behavior is particularly sought after in certain sports disciplines such as shooting at metal silhouettes or exercises on reinforced materials.

This type of warhead is also widely used in the United States for personal defense, due to its ability to maximize terminal effectiveness while reducing collateral risks. In France, its use is strictly reserved for **sport shooting in stands**, in accordance with the legislation on category B weapons.

Controlled power, taut trajectory

With a muzzle velocity of 395 m/s and nearly 800 joules of energy at the muzzle, this ammunition offers optimal performance for sports disciplines where precision and rapid reaction are essential. It retains

significant energy up to 50 meters, thanks to a ballistic coefficient of 0.116.

- **Muzzle velocity (V0):** 395 m/s – **Energy:** 796 J
- **At 10 meters:** 381 m/s – **741 J**
- **At 25 meters:** 363 m/s – **672 J**
- **At 50 meters:** 337 m/s – **581 J**

High-performance cartridge for dynamic shooting disciplines or exercises with high ballistic requirements, combining power, precision and reliability.
