A modern and robust AEG platform, designed for precision and tactical efficiency.

This black version of the **L119A2 GEN4** by **Lancer Tactical** offers a full metal construction and optimized internal mechanics, ideal for players looking for a reliable, responsive and easily customizable replica.

- **Full metal body and exterior** for remarkable strength
- **10-inch handguard** combining **Picatinny** and **M-LOK** interfaces
- **16:1 steel gears** for a fast and consistent cycle
- **NEO 25K motor** ensuring excellent responsiveness
- **Nebula 2 programmable MOSFET** with integrated optical sensor
- **Internal 245mm f/6.03 lens** promoting a stable and accurate trajectory
- **Adjustable Delta stock** with integrated QD dot
- **T-Dean connectors** optimizing current flow
- **120-round mid-cap magazine** included
- **Battery not included** , recommended: 11.1V LiPo
- **Black flame hider**

The black version of the L119A2 GEN4 stands out with its understated and professional tactical aesthetic. Designed for demanding gamers, it combines high-performance internal mechanics, an all-metal chassis, and excellent ergonomics.

Thanks to its advanced electronics and high-torque motor, the replica offers a fast cycle and particularly consistent behavior in-game.

Full metal construction and tactical design

The black finish enhances the discreet and operational character of the model. Its metal body provides an immediate impression of robustness, while the Delta stock offers comfortable support that adapts to all body types. The M-LOK/Picatinny handguard facilitates the installation of accessories: light, grip, laser, red dot sight... the platform easily lends itself to any configuration.

Reinforced internals for excellent shooting stability

With its 16:1 steel gears and NEO 25K motor, the replica boasts a crisp and smooth cycling action. The 6.03 inner barrel contributes to improved accuracy, enhancing consistency and effective range. This configuration ensures crisp, consistent shots, even during rapid transitions or in urban environments.

Nebula 2 Electronics: Control and Customization

The Nebula 2 MOSFET allows for easy configuration of firing modes and ensures the safety of the entire electrical system. It optimizes contact management, improves cycle smoothness, and protects internal components, making it ideal for intensive use or extended sessions.

FAQ

Is the black model also all metal?
Yes, the entire body is made of metal, guaranteeing sturdiness and a realistic feel.

Can M-LOK accessories be installed?
Yes, the handguard is fully compatible with M-LOK and Picatinny, allowing for complete customization.

Is the battery included?
No battery is included. An 11.1V LiPo T-Dean battery is recommended.

Is the Nebula 2 MOSFET easy to configure?
Yes, it allows for simple programming and improves the responsiveness of the replica.

Is it suitable for CQB use?
Absolutely. Its compact length, responsiveness, and accuracy make it a relevant choice for short and medium-range play.
