Compact lever-action with steampunk style, designed for sport shooting in stands.

The Boarbrer "Apocalypse" is a lever-action rifle with character, designed for sport shooters looking for compactness and personality without compromising on mechanics.

- **caliber:** .45-70 Government
- **reset mode:** manual / lever under guard
- **capacity:** 5 + 1
- **barrel length:** 431 mm (17")
- **total length:** 900 mm
- **no scratch:** 1:18
- **thread:** 5/8x24
- **stock material:** granite effect polymer with genuine leather inserts
- **weight:** approx. 3.45 kg
- **sight:** adjustable fiber optic
- **Mounting:** Picatinny + M-Lok

This product is designed for sport shooters who want a firearm that delivers immediate performance on **the range** while also boasting a strong visual presence. The **Boarbuster "Apocalypse"** combines proven mechanics, modern mounting points, and carefully considered finishes to provide a reassuring grip and lasting enjoyment.

Ergonomics and handling

The streamlined receiver design and underlever provide quick and reassuring handling. The stock angle and adjustable cheek rest promote sight alignment and reduce fatigue during shooting sessions; the polymer and leather insert combination offers a robust yet warm feel.

Stand performance

The short 431 mm barrel gives the rifle appreciable compactness without sacrificing the consistency of **.45-70 Government** groups. The **lever-action** mechanism optimizes the reloading cycle for a controlled rate of fire, ideal for practical exercises and benchrest competitions.

Options and compatibilities

The forend incorporates modular mounting solutions and a **Picatinny** top rail for optics mounting. Pre-drilled holes allow for the addition of compatible stand and training accessories (bipod, grip, sights). The 5/8x24 muzzle thread allows for the mounting of a standards-compliant attenuation device.

Maintenance and longevity

The technical finish and selected materials facilitate maintenance: regular cleaning of the barrel, lubrication of the lever axes and protection of the **Cerakote** surfaces guarantee mechanical and aesthetic longevity.

M-LOK

The **M-LOK** system is a modular mounting interface that allows accessories to be added directly to the forend without the need for complete rail systems. Its practical advantages include lightness, modularity, and compatibility with a wide range of stand accessories.

Cerakote

Cerakote treatment is a polymer ceramic coating applied to metals to protect against corrosion and wear. It maintains the aesthetic appearance (here, a copper effect) while offering mechanical resistance that inspires confidence for intensive use at the shooting range.

Lever under guard

The term **"lever under the trigger guard"** describes a cocking mechanism located in front of the trigger: it allows for a natural movement of the hand, which remains close to the stock. In practical terms, this improves the rate of fire and the shooter's safety by keeping the dominant hand under control.

- **Rails:** M-LOK integrated into the front
- **front:** granite-effect polymer with leather support zones
- **Leather inserts:** genuine leather, stitched
- **cheek rest:** adjustable
- **Attachment points:** QD connectors for strap
