### Compact lever-action with steampunk style, designed for sport shooting in stands.

The Boarbrer "Apocalypse" is a lever-action rifle with character, designed for sport shooters looking for compactness and personality without compromising on mechanics.

- **caliber:** .45-70 Government
- **reset mode:** manual / lever under guard
- **capacity:** 5 + 1
- **barrel length:** 431 mm (17")
- **total length:** 900 mm
- **no scratch:** 1:18
- **thread:** 5/8x24
- **stock material:** granite effect polymer with genuine leather inserts
- **weight:** approx. 3.45 kg
- **sight:** adjustable fiber optic
- **Mounting:** Picatinny + M-Lok

A product designed for sport shooters who want a weapon that immediately performs well on the **shooting range** while displaying a strong visual personality. The **Boarbrer "Apocalypse"** combines proven mechanics, modern attachment points and carefully designed finishes to provide a reassuring grip and lasting pleasure of use.

### Ergonomics and handling

The removed design of the receiver and the underguard lever offer fast and reassuring manipulation. The angle of the stock and the adjustable cheek rest promote visual alignment and reduce fatigue during series on the shooting range; the combination of polymer and leather inserts provides a feeling that is both robust and warm.

### Pit performance

The short 431mm barrel gives the rifle a noticeable compactness without sacrificing the regularity of **.45-70 Government** groupings. The **lever-action** mechanism optimizes the rearming cycle for a controlled firing rhythm, ideal for practical exercises and bench tests.

### Options and compatibilities

The forend incorporates modular mounting solutions and a **Picatinny** top rail for optics mounting. The slots allow for the addition of stand- and training-compatible accessories (bipod, grip, sights). The muzzle thread (5/8x24) allows for the installation of a standard-compliant attenuation device.

### Maintenance and longevity

The technical finish and selected materials facilitate maintenance: regular cleaning of the barrel, lubrication of the lever axes and protection of the **Cerakote** surfaces guarantee mechanical and aesthetic longevity.

### M-LOK

The **M-LOK** system is a modular mounting interface that allows accessories to be added directly to the forend without adding complete rails. Practical advantages: lightness, modularity, and compatibility with a wide range of stand accessories.

### Cerakote

**Cerakote** treatment is a polymer ceramic coating applied to metals to protect against corrosion and wear. It maintains the aesthetic appearance (here copper effect) while providing mechanical resistance that inspires confidence for intensive use at the range.

### Lever under guard

The term **under-guard lever** describes a recocking mechanism placed in front of the trigger: it allows a natural movement of the hand that remains close to the stock. Concretely, this improves the rate of fire and the shooter's safety by keeping the master hand under control.

- **rails:** M-LOK integrated into the forend
- **forend:** granite effect polymer with leather support zones
- **leather inserts:** genuine leather, sewn
- **cheek rest:** adjustable
- **attachment points:** QD connectors for strap
