Protection and training: high-precision snap caps for .44 Magnum.

Pack of 10 dummy cartridges designed for safety, training and risk-free functional testing.

- **Caliber:** .44 Magnum
- **Quantity:** 10 units per pack
- **Material:** CNC machined aluminum
- **Finish:** hard-anodized
- **Design:** "Integrated Absorbing Primer" insert, primer mimic
- **Uses:** dry firing, trigger adjustment, cycle testing, primerless storage

These **dummy cartridges** allow for dry firing practice, adjusting trigger pull and sensitivity, practicing trigger break, and performing functional checks without using live ammunition. They replicate the external dimensions of a **.44 Magnum cartridge** to ensure a realistic cycle in revolvers and rifles chambered for .44 Mag.

Construction and protection of the striker

Machined from precision **aluminum** and then **hard-anodized** , these snap caps offer an ultra-smooth surface and excellent wear resistance. The key element is the **Integrated Absorbing Primer** , which dissipates the firing pin's energy like a real primer, thus protecting the firearm's internal mechanism during repeated dry-fires.

Compatibility and limitations

Designed for the **.44 Magnum** caliber, these are suitable for revolvers and rifles chambered in .44 Mag. Do not use as a substitute for live ammunition: these items are inert and intended for training and functional testing purposes only.

- **Compatibility:** .44 Magnum chambered firearms (compatible revolvers and rifles)
- **Do not fire:** these snap caps do not contain usable powder or primers.
- **Care instructions:** Wipe dry after use and store in a dry place to preserve the anodizing.

Practical advice

Check for live ammunition before any dry-fire. Remove the snap caps before storing the firearm for an extended period to prevent prolonged contact with moisture. Use the snap caps for practicing safe handling and for fine-tuning trigger settings.

FAQ

- **Q: Can these snap caps be pulled open?**
  No. These are inert devices; they contain neither powder nor primer and should not be used as live ammunition.
- **Q: Do they really protect the firing pin?**
  Yes. The **Integrated Absorbing Primer** dissipates the energy of the firing pin and allows thousands of dry-fires without damaging the blank of the mechanism.
- **Q: Are they compatible with all .44 revolvers?**
  They are designed for the standard dimensions of the .44 Magnum.
