Micrometric adjustment to seat your bullets precisely after full recalibration.

The **Lee Micrometer Full Length 2-Die Set** allows for **precise reloading** with **full sizing** , ideal for new or mixed-use cases. Each set includes the essential components for reloading a specific caliber.

- **Type:** Set of 2 full recalibration tools
- **Seating:** micrometric seat with floating guide
- **Included:** shell holder, dispenser, instructions and tables
- **Compatibility:** 7/8"x14 threaded presses
- **Use:** Reloading new or mixed cartridge cases

For new or mixed-use cartridge cases

This **Micrometer Full Length die set** is specially designed for the **complete resizing** of new cases or cases from various firearms. It guarantees perfect compatibility with SAAMI/NATO dimensions while preserving the concentricity of the case/bullet assembly.

Micrometric seat with floating guide

The included **micrometric seater** ensures adjustment to the **thousandth of an inch** thanks to its laser-etched wheel. The **floating guide** perfectly aligns the bullet in the case, reducing bullet runout and optimizing shot consistency.

Use in .223 Rem or 5.56x45mm

This kit also allows you to reload **5.56 NATO** cases. Simply use the specific 5.56 reloading data published by the powder manufacturers. It's a reliable choice for **.223 Remington** reloaders in competition, hunting, or recreational shooting.

Complete with a Factory Crimp Die

When magazine dimensions limit the overall cartridge length, and the bullet cannot touch the rifling, you can improve accuracy with a **Factory Crimp Die** (sold separately), which completes the crimping for greater consistency and safety.

FAQ

Is this set suitable for 5.56x45mm NATO cases?

Yes, it can be used for reloading 5.56 NATO cases provided that specific tables for this caliber are used.

Should the cases be lubricated before use?

Yes, full resizing requires lubrication of the cases to prevent jamming and preserve the tool.

What is the purpose of the micrometric seat?

It allows for precise and reproducible adjustment of the penetration depth, essential for optimizing the initial pressure and therefore the accuracy.
