- **Sights:** Fixed fiber optic rear sight
- **Safety features:** Cylinder lock, cylinder rotation, hammer lock
- **Finish:** Black
- **Handles:** Hogue® Rubber

- **Caliber:** .44 Remington Magnum
- **Capacity:** 6 shots
- **Barrel length:** 6" (152 mm)
- **Total length:** 11" (279 mm)
- **Weight:** 635 grams

A revolver designed for sport shooting in .44 Magnum caliber

Designed for **sport shooters** seeking power and stability, this **.44 Remington Magnum** model offers a unique shooting experience. Its unusual design-with the barrel aligned with the lower chamber of the cylinder-lowers the barrel axis closer to the hand. In practice, this significantly reduces **muzzle rise** and promotes a more linear recoil.

Rhino architecture: low cannon axis

The iconic **Rhino** system positions the firing mechanism at the bottom of the cylinder. This design minimizes muzzle rise, even with powerful **.44 Magnum** loads. The result: faster follow-through and

an immediate sense of control.

6-inch barrel: precision and stability

At 6 inches (152 mm), the barrel offers an extended sight radius, which is beneficial for accuracy at medium ranges. The **1:20 twist rate** ensures effective stabilization of projectiles suited to this caliber. It represents a good compromise between ballistic performance and handling.

Enhanced ergonomics and premium materials

The **7075-T6** aircraft-grade alloy frame keeps weight down while maintaining rigidity and robustness. The steel cylinder and barrel ensure strength and durability. The **Hogue® rubber** grips provide a firm hold and excellent comfort during extended shooting sessions.

Safety and operation

Operating in **single and double action** , this revolver incorporates several safety features: **cylinder lock** , **rotation lock** , and **hammer lock** . Extraction is manual, true to the classic revolver design, ensuring mechanical reliability and ease of maintenance.

FAQ

What are the conditions for purchasing this revolver?

This .44 Magnum caliber revolver is classified in category B. Its acquisition is subject to valid prefectural authorization, a valid shooting license and compliance with current French regulations.

What is the advantage of the low barrel axis?

The barrel axis, aligned with the lower chamber of the cylinder, reduces muzzle rise upon firing. Recoil is more linear, improving control and speed of return to target alignment during sport shooting.

Is this model suitable for long-range shooting?

With its 6-inch barrel and extended sight line, it is perfectly suited for medium-range precision shooting at a range, within the framework of supervised sporting practice.
