A bright fiber optic front sight for instinctive and precise aiming.

The **EASYHIT Shooting Bead 101mm Ø3mm** is a **fiber optic front sight** designed for **shotgun shooting** in clay target shooting and small game hunting. It provides a bright aiming point that improves barrel visibility without distracting from the target.

- **Type:** Fiber optic guide
- **Length:** 101 mm
- **Diameter:** 3 mm
- **Compatibility:** Flat ventilated strip ? 6 mm
- **Attachment:** 3M adhesive (non-permanent)
- **Available colors:** Red or Green

Optimal visibility in all conditions

The **fiber optic** system captures ambient light to create a sharp, high-contrast point of light. In bright sunlight as well as in low light, the front sight remains clearly visible. The result: improved **awareness of barrel alignment** without excessive focus on the sights - particularly valuable in **clay pigeon shooting** or **small game hunting** .

Format 101 mm - Ø 3 mm

With its **101 mm** length and **3 mm** diameter, this model offers an attractive compromise between slimness and visibility. The dot remains precise while being bright enough for instinctive and rapid shooting.

Simple and reversible assembly

The **3M adhesive mount** allows for quick installation on a flat, ventilated strip at least 6 mm thick. No drilling, no modifications to the firearm: the front sight attaches cleanly and can be removed

without damaging the rifle.

Two colors to choose from

Available in **red** or **green** , it allows the perception of the illuminated dot to be adapted to the shooter's preferences and lighting conditions. Some prefer red for its strong contrast, others green for its softer visual appearance in bright daylight.

Additional features

- **Structure:** Optical fiber in a durable composite housing
- **Use:** Sport shooting and hunting
- **Installation:** Without permanent modification

FAQ

Is this handlebar compatible with all rifles?

It is compatible with shotguns equipped with a flat ventilated rib at least 6 mm wide. The rib width should be checked before installation.

Does the installation change the aiming height?

No, the system is designed not to significantly alter the aiming height. It provides a visual reference point without permanently modifying the weapon.

Which color should I choose between red and green?

The choice depends on visual preferences and lighting conditions. Red offers a strong contrast, while green is often perceived as more comfortable in bright light.
