NUMP0141	NUM'AXES Canifugue Mix/Pro Transmitter Box	Vente libre	160.00 € incl. tax

The heart of the anti-escape system to effectively secure your dogs.

The **NUM'AXES Canifugue Mix FUG1031 / FUG1033 / Pro transmitter box** is the central element of the **anti-escape system** , allowing you to delimit a secure perimeter via an **antenna wire** up to 2,000 meters.

- **Maximum antenna wire length:** up to 2000 m
- **Warning and stimulation zones:** adjustable
- **Wire break alarm:** yes
- **Number of animals:** unlimited
- **Stimulation levels:** 8 (via compatible collar)
- **Collar compatibility:** FUG1030, FUG1031, FUG1032, FUG1033, Small, Pro

The nerve center of your anti-escape fence

The **Canifugue Mix/Pro transmitter** generates the radio signal transmitted through the **antenna wire** installed around the permitted perimeter. Essentially, it defines your dog's off-limits zone. Once the wire is laid in a closed loop, the system is immediately operational.

Management of large areas up to 2,000 meters

This model accepts **antenna wire** lengths of up to **2,000 m** , making it possible to secure very large areas: rural properties, farms, or extensive gardens. The width of the **audible warning** and **stimulation** zones is adjustable directly on the control unit for precise adaptation to the terrain.

Integrated security and signal reliability

The system includes a **wire break alarm** . In the event of an accidental break (gardening, bad weather, etc.), the unit alerts you immediately. This feature prevents any unintentional interruption of the security perimeter - an essential point in outdoor environments.

Extended compatibility with the NUM'AXES range

All **NUM'AXES anti-escape transmitter units** are compatible with **NUM'AXES anti-escape receiver collars** . This model works in particular with:

- **Canifugue FUG1030**
- **Canifugue Mix FUG1031**
- **Canifugue FUG1032**
- **Canifugue Mix FUG1033**
- **Small Canifugue**
- **Canifugue Pro**

The number of collars that can be associated is **unlimited** , allowing multiple dogs to be secured within the same perimeter with a single transmitter unit.

Simple and scalable installation

The wire can be laid on the ground, buried slightly, or attached to an existing fence. It must form a **continuous loop** connecting the control box to itself. The installation is modular: you can extend or modify the route later as your needs change.

FAQ

Is this device compatible with all NUM'AXES anti-escape collars?

Yes. All NUM'AXES anti-escape transmitter boxes are compatible with the brand's anti-escape receiver collars, including FUG1030, FUG1031, FUG1032, FUG1033, Small and Pro.

What is the maximum length of wire that can be installed?

The unit accepts up to 2,000 meters of antenna wire, allowing large areas to be secured depending on the terrain configuration.

Can multiple necklaces be used with a single device?

Yes. The number of collars associated with the same transmitter box is unlimited, which allows several dogs to be kept within the same secure perimeter.
