Tight trajectory and extreme precision thanks to the polymer tip.

Sierra Tipped MatchKing bullets are **precision bullets** incorporating a **polymer tip** to optimize ballistic performance.

- **Type:** HPBT with polymer tip
- **Use:** precision shooting, competition
- **Calibers:** wide range available
- **Profile:** Optimized MatchKing warhead
- **Tip:** acetal resin
- **Power supply:** optimized for chargers

Consult the reloadable calibers according to Sierra bullet diameters.

A technological evolution of MatchKing

The **Tipped MatchKing (TMK)** rockets take the proven MatchKing base and add a **polymer tip made of acetal resin** . This design improves airflow around the nose cone, reducing drag and optimizing flight stability.

Tighter trajectory and reduced drift

Thanks to their improved ballistic coefficient, these bullets offer a **flatter trajectory** and better wind resistance. In practice, this translates into fewer corrections and increased accuracy, especially at

long range .

Smooth power supply to the charger

The presence of the polymer tip promotes **more consistent feeding** in repeating firearms. This is a significant advantage for shooters using magazine-fed rifles, where feeding reliability is essential.

Consistent precision and match manufacturing

Like all **Sierra MatchKing rifles** , the TMK series is manufactured to very tight tolerances. This results in exemplary consistency, essential for **competitive shooting** and demanding disciplines.

Dedicated use for sport shooting

These bullets are designed primarily for **precision** . They are **not recommended for hunting** , as their design prioritizes ballistic performance over controlled expansion.

Additional features

- **Manufacturing:** Match quality
- **Use:** reloading
- **Applications:** sport shooting, long-range shooting

FAQ

What is the difference with a classic MatchKing?

The Tipped version adds a polymer tip to improve the ballistic coefficient and reduce drag.

Are these bullets suitable for long-range shooting?

Yes, they are particularly effective for long-range shooting thanks to their flat trajectory and stability.

Can they be used for hunting?

No, they are designed for precision shooting and are not optimized for controlled expansion while hunting.
