SKU	Designation	French Law	Caliber	Chamber (mm)	Cartridge case base(mm)	Speed (m/s)	Wad	Shots size	MSRP
MAR1122	Lead No. 6	C	cal. 12	70 mm	25	450	Wad	6	33.00 € incl. tax

An ultra-fast cartridge designed for the most demanding long-range shooting.

The MARY ARM Volcano is a high-performance **hunting cartridge** developed for long-range shooting. Its **nickel-plated lead** load combined with a **wad with a skirt** guarantees speed, consistency, and excellent shot pattern density.

- **Caliber:** 12/70
- **Charge:** 36 g of nickel-plated lead
- **Padding:** Skirt
- **Base:** 25 mm
- **Average speed at 2.5 m:** 450 m/s
- **Average grouping at 35m:** 85% with full choke
- **Packaging:** Box of 25 cartridges
- **Compatibility:** Rifles that have undergone the superior test

A cartridge designed for long-range shooting

The **MARY ARM Volcano 36 12/70** was developed for demanding hunters seeking ammunition capable of maintaining velocity and shot pattern density at long range. From the first shot, the impression is clear: the cartridge delivers impressive velocity while maintaining excellent consistency.

The Volcano series lives up to its name. The selected powders generate particularly high velocities to optimize long-range shots on passing game or situations requiring extended range.

Nickel-plated lead for a more consistent trajectory

The use of **nickel-plated shot** is one of the key advantages of this ammunition. The nickel plating allows the shot to better retain its shape upon firing, thus limiting deformation. The result: more efficient aerodynamic penetration and flatter trajectories.

In practice, this translates to consistent groupings and better energy conservation at long range. This is typically the type of load preferred for technical shooting where consistency makes all the difference.

Skirted wadding and optimized sheaf

The wad with a skirt perfectly complements this high-velocity configuration. It improves shot protection in the barrel and contributes to the quality of the shot pattern. With a full choke, the average accuracy reaches approximately 85% at 35 meters, guaranteeing dense and consistent coverage.

- **Hunting type:** Migratory game and long-range shooting
- **Sheaf:** Dense and regular
- **Use:** High-pressure proven rifles
- **Made** in France

Performance designed for experienced hunters

The **Volcano** range is designed for users seeking high ballistic performance without compromising consistency. Even better, the combination of high velocity, nickel-plated lead shot, and a wad skirt results in a particularly effective cartridge under demanding conditions.

To fully exploit its potential, this cartridge must be used in a rifle that has undergone the superior proofing appropriate for this type of high-performance load.

FAQ

What type of hunting is this cartridge intended for?

The MARY ARM Volcano 36 is designed for long-range shooting and is particularly suitable for migratory game or situations requiring high velocity and a dense pattern.

Why use nickel-plated lead?

Nickel-plated lead is more resistant to deformation during firing, which improves the regularity of trajectories and the quality of the grouping at long distances.

Does this cartridge require a specific rifle?

Yes, this ammunition must be used in a rifle that has undergone the superior proofing suitable for high-performance loads.
