A modular tactical flashlight designed for long-range shooting and CQB.

INFORCE offers the **ARC 350 LR-M,** a modular **tactical light** designed for AR-15 platforms, **sport shooting** , and demanding professional applications. Its long-range 75,000 candela beam allows for rapid target identification up to 529 meters, while maintaining a wide and effective beam in close-quarters environments.

- **Light output:** 1200 lumens
- **Beam intensity:** 75,000 candela
- **Maximum range:** 529 m
- **Mounting:** M-LOK 45° included
- **Compatibility:** Scout-type switches
- **Power supply:** protected 18350 rechargeable battery
- **Battery life:** 45 minutes
- **Waterproof rating:** IPX8 up to 20 m
- **Durability:** MIL-STD-810H certified
- **Material:** Type III anodized 6061-T6 aluminum
- **Locking system:** 1/4 turn rotation of the head

- **Length:** 11.2 cm
- **Head diameter:** 3.5 cm
- **Weight with battery:** 133 g
- **Warranty:** Lifetime

A tactical flashlight designed for modern platforms

Compact, lightweight, and exceptionally versatile, this configuration naturally finds its place on an **AR-15** platform, a semi-automatic **tactical** rifle, or a long gun dedicated to **dynamic sport shooting** . From the moment you pick it up, you appreciate the balance between power, reduced

size, and the ergonomics of the 45° offset mount, which facilitates access to the controls without hindering the grip.

A long-range beam of 75,000 candela

The LR head develops a particularly focused beam capable of reaching 529 meters. This high intensity allows for rapid identification of silhouettes or impacts at long distances, even in dimly lit environments. In practice, the hot spot remains sharp and powerful, while the 1,200 lumens provide a comfortable peripheral halo for maintaining good visibility of the immediate surroundings.

Also effective in close-quarters environments

Unlike some flashlights designed exclusively for long range, this configuration maintains a sufficiently wide peripheral illumination for dynamic **CQB** sequences or during rapid movement between multiple zones. This compromise between range and lateral vision provides true comfort during tactical courses or nighttime sessions.

Scout-compatible modular design

The ARC system is based on a modular architecture compatible with Scout-type interfaces and switches. This compatibility opens up numerous customization possibilities to adapt the lighting to the weapon configuration or the shooter's preferences. The included 45° M-LOK mount allows for a clean and low-profile installation on modern handguards.

Robust construction for heavy-duty use

The 6061-T6 aluminum body features a Type III hard anodized finish that is particularly resistant to friction, impacts, and harsh conditions. The entire assembly meets MIL-STD-810H standards and is IPX8 certified, allowing immersion up to 20 meters. This is exactly the kind of equipment designed to remain reliable even after extended shooting sessions or repeated handling.

Compact size and rechargeable power supply

At just 11.2 cm long and weighing only 133 grams including the battery, this light remains discreet on the weapon while maintaining impressive brightness. Its protected 18350 rechargeable battery provides up to 45 minutes of runtime at full power. The quarter-turn locking system also prevents accidental activation during transport.

- **Accessory compatibility:** Scout interfaces and additional mounts
- **Mounting type:** M-LOK offset 45°
- **Recommended use:** tactical shooting, dynamic shooting, AR-15 platforms
- **Color:** Anodized black
- **Beam type:** long range with peripheral halo
- **Recharging:** removable rechargeable battery

FAQ

Is this lamp compatible with AR-15 platforms?

Yes, the Scout-compatible modular design and the included 45° M-LOK mount make it perfectly suited for AR-15 platforms and modern M-LOK handguards.

Is the rechargeable battery included?

The lamp operates with a protected 18350 rechargeable battery, designed to withstand the high demands associated with high-power tactical lighting.

Is this lamp weatherproof and shockproof?

Yes, its type III anodized aluminum body has an IPX8 certification and meets MIL-STD-810H requirements for intensive field use.
