A60029	Acetech Bifrost MKII Tracer	Vente libre	M14 - G/CCW	81	30	60	Black	107.00 € incl. tax

A compact marker that combines ball illumination and RGB flame effects.

The **Acetech Bifrost MKII Tracer** is a redesign of the renowned **Bifrost** system, featuring a completely revamped housing specifically for airsoft. Its main advantage lies in its **multi-colored flame effect** , capable of creating a succession of colors at the muzzle of the replica, complemented by a tracer function for compatible BBs. The system accepts standard BBs, **green tracer BBs** , and gel tracer BBs, with a supported rate of fire up to 35 RPS. An integrated Li-ion battery powers the entire system and recharges easily via **USB Type-C** . With a diameter of 37 mm, a length of 154 mm, and a weight of 80 g, the Bifrost MKII maintains a compact size. Its 14 mm thread allows for installation on airsoft replicas equipped with the corresponding interface.

- **Brand: Acetech**
- **Model: Bifrost MKII**
- **Type:** tracer for airsoft
- **Effect:** Bifrost multicolored flame
- **Compatible BBs:** standard, green tracer, gel tracer BBs
- **Supported cadence:** up to 35 RPS
- **Battery:** Li-ion
- **Charging:** USB Type-C
- **Thread:** 14 mm
- **Diameter:** 37 mm
- **Length:** 154 mm
- **Weight:** 80 g
- **Made** in Taiwan

Bifrost MKII: A completely redesigned new generation

The **Acetech Bifrost MKII** retains the core principles of the **Bifrost airsoft marker** in a completely redesigned body. Its new casing features more angular lines, with various perforations and a textured ring. This evolution therefore encompasses both the external appearance and the presentation of a new generation of the system.

A multicoloured Bifrost effect on the mouth

Bifrost technology is at the heart of this unit. Its **multi-colored flame mode** produces a succession of colors at the muzzle of the replica when fired. The effect is designed to visually

create the impression of a rainbow trail. An instantly recognizable light signature, particularly suited to games where the replica's visual appearance is part of the desired setup.

Tracer and flame mode combined in the same accessory

The system isn't limited to its multicolor effect. It combines **tracer** and **flame simulation** functions, allowing for multiple lighting effects with a single accessory mounted at the end of the barrel. The manufacturer also announces an intelligent power management system.

Up to 35 shots per second

The system supports a rate of fire of up to **35 RPS** , or 35 shots per second. This value indicates the maximum advertised rate of fire for the unit and is an important specification for airsoft replicas with a high rate of fire.

Standard BBs, green tracer BBs and Gel BBs

Compatibility isn't limited to **green tracer BBs** . The specifications also indicate support for standard BBs and **Gel BBs** . This distinction is useful depending on the effect used: the tracing function relies on compatible tracer consumables, while mouth-blown light effects can be used independently of a tracer BB's illumination.

Rechargeable Li-ion battery with USB Type-C

Power is supplied by a **Li-ion battery** and charging is done via a **USB Type-C** port. This connection eliminates the need for a proprietary charger for recharging the unit and simplifies its integration among the electronic equipment commonly used in airsoft.

A 154 mm format weighing 80 g

The case measures **154 mm long** by 37 mm in diameter and has a claimed weight of 80 g. These dimensions allow for precise anticipation of the additional bulk at the end of the replica before assembly, especially when it already has a compact configuration.

14 mm threaded interface

This version is advertised with a **14mm thread** . Therefore, mounting it requires a replica or interface with a corresponding thread. As the exact thread direction is not specified in the provided information, no further 14mm CCW or CW compatibility can be inferred.

FAQ

What is the difference between the Bifrost effect and the tracer function?

The Bifrost effect creates a multicolored light display at the muzzle of the replica. The tracer function, on the other hand, illuminates compatible tracer BBs during their trajectory. The two effects therefore serve different visual purposes.

Is the Bifrost MKII suitable for a high-rate-of-fire airsoft replica?

The manufacturer states that it supports up to 35 RPS, or 35 shots per second. For a high-rate-of-fire replica, this value allows for a direct comparison with the stated limit for the tracer unit.

Is it absolutely necessary to use tracer balls to enjoy the light effects?

Green tracer balls are required to utilize their illumination during flight. However, the system also supports standard balls and features a flame-mouth light effect, separate from the ball-tracing function.
