A61370	Waldo Dynamics short stroke kit BUFF Glock	Vente libre	21.50 € incl. tax

A modular kit of soft and hard buffers to customize the short stroke of Glock GBBs.

The **Waldo Dynamics Glock BUFF short stroke kit** includes **eight buffers of varying hardness and thickness** to adjust the slide travel. Compatible with Tokyo Marui, WE, and AW Custom rifles, it allows for numerous combinations to fine-tune the speed and behavior of the cycle.

- **Brand: Waldo Dynamics**
- **Model: BUFF Short Stroke Kit**
- **Type:** short stroke kit for GBB pistol
- **Compatibility:** Glock Airsoft GBB
- **Compatible brands:** Tokyo Marui, WE, AW Custom
- **Yellow buffers:** 3 pieces
- **Hardness of yellow buffers:** soft
- **Thickness of yellow buffers:** 5 mm
- **Black buffers:** 5 pieces
- **Hardness of black buffers:** hard
- **Black buffer thickness:** 3 mm
- **Thin metal washer:** 1 piece
- **Total number of buffers:** 8
- **Status:** Discontinued product, limited stock

Reduce the cylinder head stroke to speed up the cycle

The **BUFF Waldo Dynamics Glock short stroke kit** reduces the slide travel of a compatible Glock GBB. By limiting its movement, the **short stroke** reduces the travel required for each cycle, resulting in faster operation.

However, the BUFF does not rely on a single configuration. Several buffers can be combined to progressively modify the stroke and adapt the mechanical behavior of the gun according to the desired configuration.

Two hardness levels and two buffer thicknesses

The kit includes **three 5mm soft yellow buffers** and **five 3mm hard black buffers** . The difference isn't just in color: their thickness and hardness allow for the creation of coils with different characteristics.

This design offers greater flexibility when adjusting the short stroke. You can use a single type of buffer or mix the two to simultaneously adjust the overall thickness and firmness.

5mm flexible yellow buffers

With their **5 mm thickness** , the yellow buffers significantly reduce the stroke with relatively few components. Their flexible design also provides a different feel upon contact during the bolt's movement.

Three copies are provided. They can be used alone or combined with the black elements to create a custom configuration.

3mm hard black buffers

The five **3mm black buffers** are thinner and firmer. Their reduced thickness allows for more gradual adjustments to the build and increases the number of possible combinations.

That's precisely the advantage of this kit: being able to experiment with several stacks to find the desired compromise between travel reduction, responsiveness and cycle behavior.

A metal washer to complete the assembly

A **thin metal washer** is also included to protect the components of the assembly. The complete kit thus includes eight buffers and one washer, providing everything needed to create various short stroke configurations.

Tokyo Marui, WE and AW Custom compatible

The kit is designed for **Tokyo Marui, WE, and AW Custom Glock GBB pistols** . This compatibility allows it to be integrated into various customization bases commonly found in the world of gas-powered airsoft pistols.

The setting can then be adapted to the mechanical configuration of the Glock by simply changing the number, thickness and hardness of the buffers installed.

FAQ

What is the purpose of a short stroke kit on a Glock Airsoft gun?

The **short stroke** reduces the bolt travel to shorten its cycle. The BUFF kit allows you to adjust this reduction by combining several buffers of different thicknesses and hardnesses.

What is the difference between yellow and black buffers?

The **yellow buffers** are flexible and 5 mm thick. The **black buffers** are harder and 3 mm thick. The two types can be combined to customize the short stroke.

Which brands of Glock GBB pistols is this kit compatible with?

The **BUFF Short Stroke Kit Glock** is announced to be compatible with Glock Airsoft GBBs from the brands **Tokyo Marui, WE and AW Custom** .
