Valve seals designed to limit gas loss when filling GBB magazines.

The **Snappy Boi Waldo Dynamics Glock 135% recoil spring** offers increased spring rate to balance **cycle speed and efficiency** . Its low-friction finish promotes smooth movement and it is compatible with Gen 3 G17, G18, and G34 pistols from multiple manufacturers.

- **Brand: Waldo Dynamics**
- **Model: Hush Silent Fill Valve O-rings**
- **Type:** O-rings for filling valve
- **Destination:** Airsoft GBB gas magazines
- **Function:** to limit gas losses during filling
- **Effect:** quieter filling
- **Main compatibility:** Tokyo Marui filling valves
- **Compatibility:** Most filling valves of similar design
- **Color:** yellow
- **Packaging:** 5 seals
- **Status:** Discontinued product, limited stock

Limit gas losses during filling

Waldo Dynamics Hush Silent Fill Valve seals provide a simple solution to a well-known problem on some **GBB magazines** : gas escaping around the fill port during refilling.

The seal is positioned directly at the **filling valve** . It improves contact with the bottle's nozzle to limit gas leaks and spills during refilling. Refilling also becomes more discreet.

Particularly suited to Tokyo Marui chargers

This phenomenon is particularly noticeable on certain **Tokyo Marui filling valves** . Hush seals were developed to address this issue, while remaining compatible with most valves using a similar

design.

Therefore, they are not reserved solely for TM magazines and may be suitable for other brands of gas magazines with a compatible valve.

Installation directly on the valve

The principle is intentionally minimalist: the small **O-ring** is placed around the filling valve. Once installed, it provides the interface between the valve and the gas cylinder nozzle during refilling.

No complex modifications to the charger or additional mechanical parts are required. It's a small improvement that focuses on a very specific aspect of the gas supply system.

5 yellow seals per pack

Each pack contains **5 yellow Hush seals** . This distinctive color also makes them easy to identify among the small parts and seals used for GBB magazine maintenance.

The set allows you to equip several compatible chargers or simply keep replacement seals in your maintenance kit.

FAQ

What are the Hush seals used for on a GBB magazine?

Hush seals are placed on the filling valve to limit gas loss around the nozzle during GBB magazine refilling and to make refilling quieter.

Are Hush seals compatible with Tokyo Marui magazines?

Yes. **Hush Silent Fill Valve O-rings** are specifically designed for Tokyo Marui fill valves and are also suitable for most valves of similar design.

How many seals are supplied in a bag?

Each pack contains **5 yellow Hush seals** , allowing you to equip several compatible magazines or keep replacement seals on hand.
