A solid brass cleaning tip available in two diameters for the maintenance of rifled barrels.

The **Stilcrin Brass Jag US Style** is a **solid brass cleaning tip** designed for the maintenance of rifled barrels. Available in 5 or 6 mm depending on the caliber, its brass construction ensures proper contact with the inside of the barrel during cleaning.

- **Type:** Cleaning nozzle for barrel
- **Design:** US Style
- **Material:** Solid brass
- **Available diameters:** 5 mm and 6 mm
- **5mm version:** .22 LR, .222 Remington, .223 Remington calibers and 5.5mm air guns
- **6mm version:** .243 caliber
- **Mounting:** Thread for compatible cleaning rod

A solid brass jag for barrel maintenance

The **Stilcrin Brass Jag US Style** is a **cleaning tip** designed to complement a cleaning rod suited to the firearm's caliber. Its **solid brass** construction provides a softer material than the steel of the barrel, making it particularly suitable for working inside a rifled barrel without using a steel tip that could damage the surfaces.

Two diameters for several calibers

Two sizes are available. The **5mm** model is suitable for **.22 LR, .222 Remington, and .223 Remington** calibers, as well as airguns using 5.5mm pellets. The **6mm** version is designed for **.243 caliber**.

Choosing the correct diameter allows you to adapt the accessory to the specific barrel. This is an essential point when assembling a cleaning kit for several rifles of different calibers.

US Style Design

Its **US-style** design uses the same tip format commonly found on compatible cleaning rods. The jag screws directly onto the rod via its thread and then serves as the working end used for cleaning the bore of the barrel.

A simple accessory for regular maintenance

After a shooting session, proper cleaning helps remove residue from the barrel. Compact and all-metal, this accessory fits easily into a **rifle cleaning kit** or a gunsmith's workshop equipment.

FAQ

Which Stilcrin Jag should I choose for a .22 LR or .223 Remington caliber?

The 5mm reference is indicated for .22 LR, .222 Remington and .223 Remington calibers. It is also suitable for airguns using 5.5mm pellets.

What diameter should I choose for a .243 caliber rifle?

For the .243 caliber, the 6mm version is indicated.

Why is this cleaning nozzle made of brass?

Brass is used to provide a metal tip that is softer than the steel of the barrel, thus limiting the risk of marking surfaces during proper cleaning.
