UG3000	Dual Eagle MOSFET Falcon 2.0 V2	Vente libre	39.90 € incl. tax

A programmable MOSFET to customize the trigger and bursts of a Gearbox V2.

The **MOSFET Falcon 2.0 V2 Double Eagle** is a programmable electronic module designed for airsoft replicas equipped with a V2 gearbox. Its compact design facilitates integration without unnecessarily taking up internal space. Three programs allow you to adapt the replica's operation: setting a burst rate of 1 to 5 rounds in automatic mode, choosing from three trigger sensitivity levels, and customizing the response when pulling or releasing the trigger.

- **Type:** Programmable MOSFET for airsoft replica
- **Model:** Falcon 2.0 DE V2
- **Compatibility:** Gearbox V2
- **Programmable burst:** from 1 to 5 rounds in automatic mode
- **Relaxation sensitivity:** 3 levels
- **Depth adjustment:** programmable response to pressure and release
- **Protection:** against electrical overloads

A programmable MOSFET for Gearbox V2

The **Double Eagle Falcon 2.0 V2 MOSFET** allows you to adjust the behavior of an airsoft replica equipped with a **V2 gearbox** . Its burst program sets the automatic firing between 1 and 5 rounds, in order to better control the number of BBs fired with each trigger pull.

Adjusting the rebound response

Three levels allow adjustment **of the trigger sensitivity** . The system also offers separate programming of its behavior during pressure and release, to adapt the firing control to the player's preferences.

Compact size and electrical protection

The compact design of the **Falcon 2.0 DE** makes it easy to integrate into a compatible V2 gearbox. The module also helps protect the replica's electrical circuit from overloads.

FAQ - Double Eagle Falcon 2.0 V2 MOSFET

In which Double Eagle replica is this MOSFET specifically used?

The Falcon 2.0 DE is notably used in the Double Eagle M904G airsoft replica.
