- **Unit capacity:** 30 cartridges
- **Total pack capacity:** 150 cartridges
- **Unit weight:** approximately 120 to 130 g empty
- **Made** in Germany
- **Classification indicated:** category A1 9° bis

A pack of 5 magazines for AR-15/M4 platforms

The **Hera Arms H3MAG Carbon Gen. 3 pack** includes five detachable magazines, each with a 30-round capacity. Designed for AR-15/M4 platforms using the **STANAG 4179** standard, they are compatible with 5.56×45mm NATO and .223 Remington ammunition.

This packaging allows for the use of several identical magazines, with the same construction and feeding characteristics. Compatibility must be verified with the exact model of the weapon.

A reinforced polymer construction

Each H3MAG Carbon Gen. 3 magazine has a **body made of glass fiber reinforced polymer** , designed to offer good mechanical resistance while maintaining a low weight.

Weighing approximately **120 to 130 g empty** , these magazines prioritize lightweight construction. Their textured exterior enhances grip and facilitates handling, particularly when inserting or removing the magazine.

An anti-tilt lift for consistent feeding

The Hera Arms H3MAG Gen. 3 magazine incorporates a **self-leveling, anti-tilt riser** . This device is designed to maintain the riser's alignment during its movement inside the magazine.

Combined with a corrosion-resistant steel spring, it assists the cartridges as they rise towards the feed lips. The **removable base** facilitates access to internal components for cleaning and maintenance.

A pack of 5 identical chargers

This pack includes **5 Hera Arms H3MAG Carbon Gen. 3 magazines** , each with a capacity of 30 rounds.

All five magazines share the same features: reinforced body, anti-tilt lifter, corrosion-resistant spring, and removable base plate. They form a homogeneous set for compatible weapons.

Applicable regulations

30-round magazines for centerfire semi-automatic shoulder arms are subject to specific regulations in France.

The classification indicated for this model is **category A1 9° bis** . Their acquisition and possession are prohibited in principle, except where an applicable regulatory exemption applies. A shooting license alone is not sufficient to justify their acquisition.

The conditions of authorization and the limits of possession must be verified with regard to the regulations in force and the situation of the purchaser.

FAQ - Hera Arms H3MAG Carbon Gen. 3

How many chargers are in this pack?

The pack includes **5 Hera Arms H3MAG Carbon Gen. 3 magazines** , each with a capacity of 30 rounds, for a combined capacity of 150 rounds.

What calibers are compatible with these magazines?

The magazines are designed for **5.56×45mm NATO and .223 Remington** ammunition, on platforms compatible with the STANAG 4179 standard.

What is the purpose of the anti-tilt lift?

The anti-tilt elevator helps to keep the cartridges properly aligned as they are raised in the magazine, in order to promote a consistent feed.

Can the chargers be disassembled for cleaning?

Yes. Each charger has a **removable base** allowing access to its internal components for maintenance operations.

Are all five chargers identical?

Yes. The pack contains five magazines of the same model H3MAG Carbon Gen. 3, in black finish, with an individual capacity of 30 rounds.
