| RWS250 | EVO 159 gr / 10.3 g | C | 7 x 65 R | Evolution | 3379 | 810 | 20 | 159 | 132.00 € incl. tax |

Maximum penetration and guaranteed exit for medium and large game.

The RWS Evolution® in 7x65 R ensures deep penetration and reliable exit, ideal for medium and large game.

- **Caliber** : 7x65 R
- **Warhead type** : Evolution® (Power Bonding)
- **Weight** : 159 gr / 10.3 g
- **Initial velocity** : 810 m/s
- **Initial energy** : 3379 J
- **Packaging** : Box of 20 cartridges

For more than a century, the Rheinisch Westfälische Sprengstoff-Actien-Gesellschaft, or RWS, has produced quality ammunition for hunting, sport shooting and long-range shooting (TLD).

The different warheads and their characteristics:

- **DRIVEN HUNT**: deformation warhead, made of copper, designed specifically for driven hunting. The projectile with its flat tip, its boat-tail base and its performance grooves guarantee exceptional stopping power with maximum residual weight, even at short distances. Driven Hunt bullets do not contain lead (lead free).
- **EVOLUTION GREEN**: lead-free bullet with limited fragmentation. Neutral tin core, to guarantee food safety. Thanks to its pre-fragmented front core and its Speed Tip tip, the Evolution Green bullet allows strong stopping power at long distances.
- **HIT**: expanding projectile without lead, with a constant weight on a non-malleable base. The assembly guarantees rapid mushrooming of the warhead, generating strong stopping power. It is perfectly suited to medium game hunting.

- **SPEED TIP:** cartridge fitted with a Speed Tip projectile with tip having low air resistance to maintain a straight trajectory. The rear part of the projectile, in the shape of a V, ensures precision and stability of the trajectory, to combine regularity and maximum stopping power.
- **UNI CLASSICS:** specially developed for big game hunting. The harder, heavier rear core deploys its effects more in depth, providing high knockdown power and consistent fragmentation.
- **KS CONICAL POINT:** warhead with controlled expansion resulting from the combination of a thickness of jacket and an ideal density of the lead core. The outer shape of the projectile guarantees low air resistance.
