Compact and handy, designed for sport shooting and short-range precision.

The **Chiappa Rhino 20 DS Revolver** in **.357 Magnum** offers a compact solution for the shooting range: low-barrel architecture, robust mechanics and complete delivery for training. Its design promotes recoil control and rapid retargeting.

- **caliber:** .357 Magnum
- **barrel length:** 2 inches (51 mm)
- **action type:** double action only
- **frame:** Ergal (aeronautical aluminum alloy)
- **sights:** fixed
- **accessories included:** 3 Moon Clips, screwdriver set, swab, case
- **capacity:** 6 shots

Low-positioned barrel

The **low-mounted barrel** aligns the barrel axis with the lower chamber of the cylinder, bringing the recoil axis closer to the shooter's hand. This reduces rotational torque and barrel lift at the start of the shot, facilitating rapid return to target and control of tight bursts.

Ergal (aeronautical aluminum alloy)

Ergal is a reinforced aluminum alloy used in aeronautics for its excellent stiffness/weight compromise. On the **carcass** , it lightens the assembly without sacrificing structural strength, improving balance and comfort during long training sessions.

Moon Clip

Moon Clips are loading devices that hold cartridges together for faster loading and ejection from the barrel. They are useful in competitive training to reduce downtime and standardize reloading sequences.

Double action trigger

Double action means the trigger cocks and fires the hammer with a single pull. On this short model, the absence of single action favors consistency and ease of use, with a trigger travel designed for controlled firing from the rest position.

- **total length:** 164 mm
- **weight:** 700 g
